

# E2C/VCP Cassette Maintenance

E2C & VCP\* cassettes are designed and manufactured for the harshest environment with optically tuned reflectors to maximise the lamps' curing effect. To maintain the long-term operation of the UV system the cassettes should be serviced regularly (every two years). The service can increase the output of the cassette by up to 90%.

GEW offers four levels of service kit at extremely competitive prices to keep the cassette and UV system at peak operation. GEW also offer **Service+** where the cassette is returned to GEW for servicing by one of our fully trained technicians. **Service+** comes with a six-month warranty and includes the time taken to fit the service kit and perform tests.

## BRONZE

## SILVER

## GOLD

## PLATINUM

Includes all the highest wearing mechanical & electrical components.	Dichroic reflector inserts to optimise the curing.	BRONZE + SILVER to optimise the curing to nearly new standard.	GOLD + a new GEW lamp is fitted and the cassette is fully tested.
